

## GENEVA SOUND SYSTEM – MODEL XL

The XL is a reference system in some legendary recording studios in rock and roll history, and Geneva is also found in the homes and studios of leading product designers, fashion creators, architects, artists and art collectors.

**GenevaSound XL** fills a concert hall, thanks to its six 100-watt amplifiers powering six speakers, including two 8-inch subwoofers, for a total of 600 watts of Class D amplifiers. This new technology, pioneered by Geneva, consumes four times less energy than conventional audio. These energy-savers, housed in handcrafted wood cabinets made with a low-waste approach to design, manufacturing and marketing, made Geneva the #1 new sustainable product in Metropolis, the magazine of design. The XL's sound is why Home Theater, the magazine of high-end sound, gave it the Rave award for best new product.

### WHAT'S INSIDE
